The Retirement Investment Committee
The Board of Trustees
City of Kalamazoo Employees Retirement System
Kalamazoo, Michigan

Ladies and Gentlemen:

Submitted in this report are the results of the Fifty-Seventh Annual Actuarial Valuation of the City of Kalamazoo Employees Retirement System. This report was prepared at the request of the City.

The actuarial calculations were prepared for purposes of complying with the requirements of Statements No. 25 and No. 27 of the Governmental Accounting Standards Board (GASB) and the Michigan State Constitution. The calculations reported herein have been made on a basis consistent with our understanding of these accounting standards and appropriate law. Determinations of the liability associated with the benefits described in this report for purposes other than satisfying the City's financial reporting and contribution requirements may produce significantly different results. This report may be provided to parties other than the City of Kalamazoo only in its entirety and only with the permission of the City of Kalamazoo.

The valuation was based upon information furnished by the City concerning Retirement System benefits, financial transactions, and individual active members, terminated members, retirees and beneficiaries. Data was checked for internal and year-to-year consistency, but was not otherwise audited.

Both of the undersigned are Members of the American Academy of Actuaries and meet the Qualification Standards of the American Academy of Actuaries (MAAA) to render the actuarial opinion contained herein.

Respectfully submitted,

W. James Koss, ASA, EA, MAAA

Curtis Powell, EA, MAAA

WJK/CP:lr

SECTION A
EXECUTIVE SUMMARY

EXECUTIVE SUMMARY

Purpose of an Actuarial Valuation

The City of Kalamazoo Employees Retirement System is known as a defined benefit retirement system. The amount of benefits payable to a member upon retirement, termination, death or disability is defined in various contracts and legal instruments and is based, in part, on the member's years of credited service and final compensation. The amount of contribution needed to fund these benefits cannot be known with certainty. A primary responsibility of the fiduciaries of the Retirement System is to establish and monitor a funding policy for the contributions made to the Retirement System.

In some jurisdictions, contributions are made by the plan sponsor as benefits come due. This is known as pay-as-you-go financing. The state of Michigan mandates that "Financial benefits arising on account of service rendered in each fiscal year shall be funded during that year and such funding shall not be used for financing unfunded accrued liabilities". The determination of a contribution which satisfies this constitutional requirement is achieved through an actuarial valuation.

The Actuarial Valuation Process

Under the actuarial valuation process, current information about System members is collected annually by staff at the direction of the actuary, which will assist the actuary in estimating benefits in the future. The benefit provisions are also collected. By making assumptions about future activities such as life expectancy and retirement patterns, the actuary is able to use the information collected to project the benefits that will be paid from the Retirement System to current members. These projected future benefit payments are discounted into today's dollars using an assumed rate of investment return assumption to determine the Present Value of Future Projected Benefits (PVFB) of the Retirement System. The PVFB estimates the value of the benefits promised to all members as of a valuation date, and includes future pay and service for members which has not yet been earned. An actuarial cost method is then used to allocate the PVFB to past, current and future service.

There are many actuarial cost methods. Different actuarial methods will produce different contribution patterns, but do not change the ultimate cost of the benefits. The ultimate cost of benefits will only become known after the final payment is made from the Retirement System. The past, current and future service components of the PVFB are respectively known as the actuarial accrued liability (AAL), normal cost (NC) and present value of future normal costs (PVFNC). The actuary computes the liability components (PVFB, NC, AAL, and PVFNC) for each participant in the Retirement System at the valuation date. These liability components are then totaled by divisions within the Retirement System. These division totals are then consolidated to determine liabilities for the total Retirement System.

EXECUTIVE SUMMARY (CONTINUED)

The Actuarial Valuation Process (continued)

A contribution made to cover the normal cost satisfies the Michigan Constitution requirement to fund financial benefits arising on account of service rendered in the fiscal year. The unfunded actuarial accrued liability (UAAL) is the portion of actuarial accrued liability that is not covered by the assets of the Retirement System. The UAAL can be a negative number, which means that the Retirement System has more assets than actuarial accrued liability. We refer to this condition as overfunded liability in this summary. The assets used for these purposes are an actuarial value of assets (AVA), not market. An actuarial value of assets is a smoothed value of assets which is used to limit contribution volatility. To satisfy the requirements of the Michigan Constitution, the actuary calculates the total annual contribution to the Retirement System as the normal cost plus a contribution towards unfunded actuarial accrued liability.

A valuation report is produced annually which contains the contribution for the fiscal year as well as the funded status of the Retirement System. The primary purpose of producing a valuation report annually is to replace the estimated activities which were based on assumptions with the actual experience of the Retirement System for the prior year. The experience gain (loss) is the difference between the expected and the actual UAAL of the Retirement System. An experience loss can be thought of as the amount of additional UAAL over and above the amount that was expected from the prior year due to deviation of actual experience from the assumptions. Similarly, an experience gain can be thought of as having less UAAL than that which was expected from the prior year's assumptions.

Computed Employer Contributions - Fiscal Year Beginning January 1, 2009

As expected, based on last year's results, City contributions will not be required for year 2009.

The pensions provided by the City to its employees through the Retirement System are valuable financial benefits. Every year that City employees earn another year of credit toward their pensions, there is a cost associated with that credit. The City's cost of benefits accruing during the year, the City normal cost, totals \$6.1 million for fiscal year beginning January 1, 2009. Refer to page B-2 for additional information. The reason that City contributions are not currently needed to support the Retirement System is that favorable experience over the last 25 years ending in 2008 has resulted in assets in excess of the accrued liability as of the valuation date. This overfunded liability is currently supporting the pension costs that would otherwise require City contributions. As employees accrue larger pensions by earning additional service each year, the cost of those larger pensions may use up the overfunded liability.

EXECUTIVE SUMMARY (CONTINUED)

Contribution Requirements for the Foreseeable Future

In order to minimize fluctuations in contribution rates resulting from investment return volatility, the System calculates contributions based on a smoothed value of assets. This smoothed asset value, or actuarial value of assets, recognizes a given year's asset gain or loss over the current and subsequent four years. Only 20% of the loss on assets during 2008 was reflected in the current year's actuarial value of assets, with the remainder to be recognized over the next four years.

As of December 31, 2008, the System's actuarial value of assets exceeded the market value by \$137,897,042 (or 37.4%). Had the December 31, 2008 valuation been completed using the System's market value of assets in place of the actuarial value of assets the City's contribution would have been 7.05% of payroll. Unless offset by future actuarial gains (assuming there are no changes in benefits) contribution rates are expected to trend toward this rate in the short term (within ten years). Future investment gains would offset some (or perhaps all) of the contribution increase; conversely, future investment losses would add to the contribution increase. Over time, contribution rates will trend toward the normal cost of benefits, or 13.29% of payroll.

Reasons for Changes

There are three general reasons why contribution requirements change from one valuation to the next. The first is a change in the benefits or eligibility conditions of the System. The second is a change in the valuation assumptions used to predict future occurrences and the methods used to finance the benefits. The third is the difference during the year between the System's actual experience and what the assumptions predicted, or the plan experience.

Changes in Benefit Eligibilities since the Last Valuation

The following changes in System benefits and member contributions have been reflected for the first time in this valuation report:

- *Change to the 13th check program*
Increase (decrease) in liability: **\$(1,509,026)**

EXECUTIVE SUMMARY (CONTINUED)

Changes in Cost Methods and Actuarial Assumptions

No changes in cost methods or assumptions have been implemented for the first time with this valuation.

Every five years at the request of the Investment Committee, we undergo a comprehensive review of the assumptions and methods used in the actuarial valuation. The last experience review was based on the five year period ending on December 31, 2003. The next review is scheduled for the five year period ending December 31, 2008.

2008 Plan Experience

There was an experience loss of \$(20,384,140) during 2008. This represents (6.23)% of the 2007 accrued liabilities. Given that much of this loss resulted from asset experience, this is a reasonable variation. The effect of this loss is a decrease in the overfunding for all groups and an increase in the need for future contributions.

Causes of the Loss

Net investment income was less than the long-term assumption of 7.5%, resulting in a loss of (\$16,689,801). The rate of return for 2008, using valuation methodology, was 4.12%.

Investment gain (loss)	\$ (16,689,801)
Remaining gain (loss)	<u>(3,694,339)</u>
Gain (loss) from all causes	\$ (20,384,140)

2008 Funding Position

This year valuation assets represent 146.9% of accrued liabilities; last year the ratio was 153.0%. The decrease in overfunding is the result of the accrual of benefits during the year and the year's unfavorable experience.

EXECUTIVE SUMMARY (CONTINUED)

Conclusions

For years, the overfunded position enjoyed by the System generated a funding credit which allowed the City to reduce, then eliminate, annual contributions to the System trust. Domestic and global investment markets produced negative asset returns in 2008 for the City of Kalamazoo (and likely every retirement system). The scheduled recognition of the 2008 investment losses will erode the System's funded status over the next few years. Unless offset by future actuarial gains, the reduction in funded status will likely mean that City contributions will once again be required in the future.

SECTION B
VALUATION RESULTS

COMPUTED CONTRIBUTIONS TO PROVIDE BENEFITS

The Retirement System is supported by contributions from the City (when required) and active members and by the investment income earned on System assets. Member contribution rates are determined by the benefit provisions of the System and are summarized in Section B of this report. The City provides an actuarially determined contribution, the remainder, if any, needed to meet the financial objective.

Member and City contributions cover both (i) normal cost, and (ii) financing of the unfunded accrued liability over a period of future years. The normal cost is the portion of System costs allocated to the current year by the valuation method described in Section D. The unfunded accrued liability is the portion of System costs not covered by present System assets and future normal costs.

For a plan that is overfunded, the contribution income covers the normal cost less an amortization credit on the overfunding. When a plan is extremely overfunded, the amortization credit can completely offset the normal cost, eliminating the need for contribution income. This can persist for a period of years, or even indefinitely.

When non-zero contributions are once again required, we recommend one of the following procedures for determining City contributions to the Retirement System.

- (1) Contribute dollar amounts for a period which are equal to the City's percent-of-payroll contribution requirements on page B-2 multiplied by the covered active member payroll for the period. Adjustments should be made as necessary to exclude items of pay that are not covered compensation for Retirement System benefits and to include non-payroll payments that are covered compensation.
- (2) Contribute the dollar amounts on page B-2.

**CONTRIBUTIONS TO PROVIDE BENEFITS
EXPRESSED AS PERCENTS AND DOLLARS OF ACTIVE MEMBER PAYROLL**

Contributions for the Year Beginning January 1,	2009	2008
Normal cost of benefits		
Age & service	15.12 %	14.98 %
Disability	1.08	1.08
Pre-retirement survivor	0.50	0.49
Refunds of member contributions	0.21	0.22
Total normal cost	<u>16.91</u>	<u>16.77</u>
Less: Member contributions*	3.62	3.69
Employer normal cost	<u>13.29</u>	<u>13.08</u>
Unfunded actuarial accrued liabilities^	(42.20)	(46.60)
Employer Contribution Requirement@	(28.91)	(33.52)
Payroll	\$ 44,159,590	\$ 42,889,419
Recommended Employer Contribution	\$ 0	\$ 0

Contributions for the Year Beginning January 1,	2009	2008
Normal cost of benefits		
Age & service	\$ 6,897,532	\$ 6,649,789
Disability	491,802	477,524
Pre-retirement survivor	226,894	219,208
Refunds of member contributions	97,415	98,476
Total normal cost	<u>7,713,644</u>	<u>7,444,997</u>
Less: Member contributions*	1,611,926	1,611,694
Employer normal cost	<u>6,101,718</u>	<u>5,833,302</u>
Unfunded actuarial accrued liabilities^	(19,377,852)	(20,785,232)
Employer Contribution Requirement@	\$ (13,276,134)	\$ (14,951,930)
Payroll	\$ 44,159,590	\$ 42,889,419
Recommended Employer Contribution	\$ 0	\$ 0

* Weighted average of various contribution rates.

@ As the System cannot contribute back to the employer, no employer contribution is recommended.

^ Page B-5 displays the unfunded accrued liabilities (or overfunding) that are amortized by the contribution rates shown above.

Note: Consistent with prior years, contributions have been calculated separately by division (KMEA, AFSCME/CSO, Exempt, Metro Transit and Public Safety). Divisional results have been summed and are shown in total throughout the report.

RECONCILIATION OF CITY CONTRIBUTION RATES

	Total
1) Contribution Requirement 2007 Valuation	(33.52) %
2) Expected Increase (Open Amortization)	+ 5.28
3) (1) plus (2)	(28.24)
4) Group Experience (Gain/Loss)	+ 5.53
5) (3) plus (4)	(22.71)

1. Valuation Basis: (A.4) / (B.1)	146.9%
2. Market Basis: (A.4) / (B.2)	106.9%

Assets and Accrued Liabilities

Valuation Year

1999 assets equaled 158% of accrued liabilities.

2008 assets equaled 147% of accrued liabilities.

**DEVELOPMENT OF EXPERIENCE GAIN (LOSS)
YEAR ENDED DECEMBER 31, 2008**

Actual experience will never (except by coincidence) exactly match assumed experience. It is hoped that gains and losses will cancel each other over a period of years, but sizable year-to-year fluctuations are common. Detail on the development of the experience gain (loss) is shown below.

	Year Ending December 31	
	2008	2007
(1) UAAL* at start of year	\$(173,545,374)	\$(151,179,026)
(2) Normal cost from prior year	7,405,945	7,130,889
(3) Actual contributions	1,723,718	1,599,967
(4) Interest accruals on (1), (2) and (3)	(12,805,387)	(11,133,517)
(5) Expected UAAL before changes: (1) + (2) - (3) + (4)	(180,668,534)	(156,781,621)
(6) Change from benefit increases	(1,509,026)	1,205,025
(7) Change from revised actuarial assumptions and/or methods	0	0
(8) Expected UAAL after changes: (5) + (6) + (7)	(182,177,560)	(155,576,596)
(9) Actual UAAL at end of year	(161,793,420)	(173,545,374)
(10) Gain (loss): (8) - (9)	(20,384,140)	17,968,778
(11) Gain (loss) as percent of actuarial accrued liabilities at start of year	(6.23%)	5.76%

* *Unfunded actuarial accrued liabilities.*

2008 Gain (Loss)		
Totals	Investment	Non-Investment
\$(20,384,140)	\$(16,689,801)	\$(3,694,339)

DEVELOPMENT OF VALUATION ASSETS

Year Ended December 31:	2006	2007	2008	2009	2010	2011	2012
A. Valuation Assets Beginning of Year	\$422,565,761	\$463,280,963	\$500,788,244				
B. Market Value End of Year	523,243,080	519,099,849	368,695,531				
C. Market Value Beginning of Year	470,042,448	523,243,080	519,099,849				
D. Non-Investment Net Cash Flow	(13,126,982)	(14,581,860)	(14,520,471)				
E. Investment Income							
E1. Market Total: B - C - D	66,327,614	10,438,629	(135,883,847)				
E2. Amount for Immediate Recognition (7.5%)	31,200,170	34,199,252	37,014,601				
E3. Amount for Phased-In Recognition: E1-E2	35,127,444	(23,760,623)	(172,898,448)				
F. Phased-In Recognition of Investment Income							
F1. Current Year: 0.2 x E3	7,025,489	(4,752,125)	(34,579,690)				
F2. First Prior Year	627,114	7,025,489	(4,752,125)	\$(34,579,690)			
F3. Second Prior Year	5,936,947	627,114	7,025,489	(4,752,125)	\$(34,579,690)		
F4. Third Prior Year	0	5,936,947	627,114	7,025,489	(4,752,125)	\$(34,579,690)	
F5. Fourth Prior Year	0	0	5,936,948	627,112	7,025,488	(4,752,123)	\$(34,579,688)
F6. Start-up Phase In	9,052,464	9,052,464	9,052,463	0	0	0	0
F7. Total Phased-In Recognition	22,642,014	17,889,889	(16,689,801)	(31,679,214)	(32,306,327)	(39,331,813)	(34,579,688)
G. Valuation Assets End of Year: A + D + E2 + F7	463,280,963	500,788,244	506,592,573				
H. Difference between Market & Valuation Assets: B - G	59,962,117	18,311,605	(137,897,042)	(106,217,828)	(73,911,501)	(34,579,688)	0
I. Valuation Asset Recognized Rate of Return	12.94%	11.42%	4.12%				
J. Market Value Recognized Rate of Return	14.31%	2.02%	-26.55%				

The Valuation Assets recognizes assumed investment income (line E2) fully each year. Differences between actual and assumed investment income (line E3) are phased in over a closed 5 year period. During periods when investment performance exceeds the assumed rate, Valuation Assets will tend to be greater than market value. During periods when investment performance is less than the assumed rate, Valuation Assets will tend to be greater than Market Value. The Valuation Assets are unbiased with respect to Market Value. At any time, it may be either greater or less than Market Value. If assumed rates are exactly realized for 5 consecutive years, it will become equal to Market Value.

VALUATION ASSET GROWTH HISTORY

Year	Net Contribution Income	Net Investment Return	Benefit Payments and Refunds	Year End Assets
1984	\$ 4,390,857	\$ 3,492,378	\$ 2,249,439	\$ 47,240,035

DEVELOPMENT OF VALUATION INVESTMENT GAIN (LOSS) YEAR ENDED DECEMBER 31, 2008

The December 31, 2007 valuation assumed an average 7.5% net return on valuation assets for future years. Net investment return in excess of 7.5% represents a gain. If net investment return falls short of 7.5%, the difference between an income of 7.5% and the net return represents a loss. For the year ended December 31, 2008, the valuation anticipated investment return of \$37,014,601 (see item E2 on page B-8). Total phased in recognition amounted to a loss of (\$16,689,801) for the year (see item F7 on page B-8), resulting in a return of 4.12% on a valuation basis (see item I on page B-8).

Please note that this analysis uses asset values and investment income as defined for the actuarial valuation. It is not, therefore, appropriate as a measure of manager performance.

RATES OF RETURN AND OF CHANGE PAYS AND LIABILITIES

	Year Ended December 31					5 Year Average*
	2008	2007	2006	2005	2004	
Increase in average salary#	4.9%	2.8%	2.8%	2.1%	3.8%	3.3%
Return on assets^	4.1	11.4	12.9	11.6	11.7	10.3
Liability growth	5.4	4.9	6.0	11.1	7.8	7.0

* *Compound rate of increase.*

For members employed throughout the most recent two years. For detail regarding pay increases, please see pages B-12 and B-13.

^ *The nominal rate of return was computed using the approximate formula $i = I$ divided by $1/2 (A + B - I)$, where I is actual investment income net of expenses, A is the beginning of year asset value, and B is the end of year asset value.*

Please note that the liability and/or asset growth was affected by the following special occurrences:

- Plan amendments – every year except 2004
- Changes in valuation assumptions – 2004
- Changes in asset valuation methodology – 2004
- Changes in actuarial cost method – 2005

MEASURING CHANGES IN PAY FOR 2008

There are several different measures of how pays change that are significant to an actuarial valuation. The most basic is how the covered payroll of the employees participating in the plan changes from 2007 to 2008. The following statistics show these changes.

	KMEA	AFSCME/ CSO	General Exempt	Metro Transit	Public Safety	Combined
2007 payroll	\$5,571,227	\$8,209,133	\$9,103,706	\$3,289,156	\$16,716,197	\$42,889,419
2008 payroll	5,594,797	8,218,675	9,092,841	3,806,553	17,446,725	44,159,591
Increase in payroll	0.4%	0.1%	(0.1%)	15.7%	4.4%	3.0%

While the change in payroll size is reality for the City in terms of its budget, an actuary must trace how pays are changing for individual employees from one year to the next. Gross payroll changes represent only a rough measure of how pays change for the year. It does not take into account the fact that the number of covered employees has changed. Growth in the number covered should mean that the payroll is larger; fewer people covered should mean that the payroll decreases.

When an actuary performs a valuation of a pension plan, the principal task with regard to pays is projecting how each employee's pay is likely to change as that employee continues in City employment. In this way, the actuary projects a person's pay from the current amount to the amount on which a pension may be calculated, the pay during the last few years of employment. To understand how the pay of covered employees is changing from year-to-year, the actuary must eliminate from the rough payroll statistics the new employees and the terminating employees. This will narrow the study group to the people who worked in both years and allow an "apples-to-apples" comparison. There is one more adjustment to be made. The pay for a person hired during 2007 is for only the portion of 2007 that the person was a City employee. If we compare these people's 2007 pays to their pays for a full 12 month 2008 year, the analysis will be distorted. To avoid this, we omit plan participants who did not work throughout 2007.

These figures show how pays changed between 2007 and 2008 for people who were in City employment throughout those two years.

SECTION C

SUMMARY OF THE INFORMATION SUBMITTED FOR THE VALUATION

**BRIEF SUMMARY OF BENEFIT PROVISIONS
AS REPORTED FOR DECEMBER 31, 2008 VALUATION**

Eligibility

Amount

**REGULAR RETIREMENT
(no reduction factor for age)**

General: Age 57 with 25 years of service, or age 62 with 10 years of service. AFSCME members only may also retire at age 60 with 20 years of service.

Total service multiplied by:

2.1% of FAC – KMEA – effective 1/1/08
2.1% of FAC – AFSCME – effective 10/2/07
2.1% of FAC – Metro Transit
2.3% of FAC – Exempt members
2.1% of FAC – Other General members–CSO – effective 1/1/08
2.7% of FAC – Public Safety members

FAC (final average compensation) – Highest 3 consecutive years out of the last 10.

Public Safety: 25 years of service or age 50 with 10 years of service.

Maximum benefit for Public Safety members is equal to 70.2% of FAC.

**EARLY RETIREMENT
(age reduction factor used)**

General: Age 55 with 15 years of service.

Computed as a regular retirement but reduced by 4/10 of 1% for each month and fraction of a month by which retirement precedes age 62 if less than 25 years of service or age 57 if 25 or more years of service.

Public Safety: 20 years of service.

2% of final average compensation multiplied by years of credited service.

DEFERRED RETIREMENT

10 years of service for most members, 5 years for Exempt, 9 years for AFSCME and 8 years for KMEA. Benefit begins at age 62 for General employees, and at age 50 for Public Safety employees.

General: Computed as a regular or early retirement but based upon service and final average compensation at termination date.

Public Safety: Computed as early retirement.

NON-DUTY DEATH-IN-SERVICE

10 years of service for most members, 5 years for Exempt, 9 years for AFSCME and 8 years for KMEA.

General: Computed as a regular retirement but actuarially reduced in accordance with a 100% joint and survivor election.

Public Safety: A benefit of 33-1/3% of final compensation is paid to the surviving spouse. Unmarried children under 18 years of age receive equal shares of 25% of final compensation.

DUTY DEATH-IN-SERVICE

Payable to the survivors of a member who died in the line of duty.

A benefit of 33-1/3% of final compensation is paid to the surviving spouse. Unmarried children under 18 years of age receive equal shares of 25% of final compensation. Worker's compensation payments are offset.

NON-DUTY DISABILITY

10 years of service for most members, 5 years for General Exempt, 9 years for AFSCME and 8 years for KMEA.

Computed as regular retirement. Reduced on dollar-for-dollar basis by amount of worker's compensation, if any.

BRIEF SUMMARY OF BENEFIT PROVISIONS AS REPORTED FOR DECEMBER 31, 2008 VALUATION

Eligibility

Amount

DUTY DISABILITY

No age or service requirements.

General: Computed as regular retirement with additional service credit granted from day of actual retirement to date of voluntary retirement eligibility.

Public Safety: Computed as regular retirement. During worker's compensation period benefit cannot exceed the difference between final compensation and worker's compensation.

DEATH AFTER RETIREMENT

Spouse of Public Safety member retired on or after July 1, 1972.

50% of the regular retirement benefit the deceased retiree was receiving.

POST-RETIREMENT BENEFIT INCREASES

AFSCME members who retire on and after 10/25/1999.

1% increases compounded annually, beginning 1 year after retirement; 2% compounded annually beginning at age 75.

KMEA members.

1.5% increases compounded annually, beginning the latter of the Retirees 64th birthday and 1 year after retirement; 2% compounded annually beginning at age 75 (effective in 2002).

Transit union members.

1% increases compounded annually, beginning 1 year after retirement; 2% compounded annually beginning at age 75.

Public Safety members who retired on and after 1/1/95 with 25 or more years of service.

2% increases compounded annually.

Exempt members.

1.5% increases compounded annually one year after retirement for members who elected to contribute by May 2006.

13TH CHECKS

Retired by 12/31/1999; retired at least 5 years; have attained age 70 prior to June 1 of the year preceding the periodic payment to be made; had at least 25 years of service with the City; ineligible for post-retirement benefit increases; pension less than \$20,000. Continuation of this program is conditional as described in the ordinance.

Special payment during 2001 and every third year thereafter. Amount equals \$47.02 per point as of December 31, 2004, points accumulated for each year of service and each year retired; not to exceed difference between \$28,000 and annual pension; \$43.38 value increases annually after 2001; aggregate payments in any year may not exceed \$750,000. However, no payment shall be made in any year in which the Fund's actuary projects the need for City contributions to the fund within 10 years of the projection nor if the actuary recommends a contribution by the City for that year.

MEMBER CONTRIBUTIONS

AFSCME members:

1% - effective 10/2/06. If funding % goes below 120% contribution rate reverts to 2%.

Transit union and KMEA members:

1% of AC.

Exempt members:

1.5% of AC, 3% of AC for Exempt Members hired after 6/1/2006, 3.5% for Exempt Members who signed up for the PRA by May of 2006.

Non-Sworn Public Safety members:

1% of AC.

Sworn Public Safety members:

6.50% of AC.

CITY CONTRIBUTIONS

Actuarially determined amounts, which, together with member contributions, are sufficient to cover both (i) normal costs of the plan, and (ii) financing of unfunded accrued benefit values over a selected period of future years.

**INCOME AND DISBURSEMENTS
DURING YEAR ENDED DECEMBER 31, 2008
(COST VALUE)**

Source of \$39,669,811 in Income

SECTION D

ACTUARIAL COST METHODS AND ASSUMPTIONS

VALUATION METHODS AND ASSUMPTIONS

The normal cost was computed as follows:

The series of contributions necessary to accumulate the present value at time of retirement of the portion of a member's pension attributable to service likely to be rendered after the valuation date was computed so that each contribution in the series was a constant percentage of the member's year-by-year projected covered compensation. This is the individual entry age normal actuarial cost method.

The accrued liability was computed and financed as follows:

Retirees and Beneficiaries: The discounted value of pensions likely to be paid retirees and beneficiaries was computed using the investment return and mortality assumptions. This amount was financed by applicable accrued assets.

Active and Inactive members: The discounted value of benefits likely to be paid active and inactive members on account of service rendered prior to the valuation date was computed using the assumptions outlined on the following pages. The computed amount was reduced by applicable valuation assets and the remainder (or overfunding) was financed as a level percent-of-payroll over a rolling period of 10 years.

Asset valuation method: Last year's valuation assets are increased by contributions and expected investment income on last year's valuation assets and non-investment net cash flow and reduced by refunds, benefit payments and expenses. To this amount is added the phased-in recognition of investment income. The phased-in recognition is the sum over the five years ending on the valuation date of 20% of the difference between each years expected return and actual market return.

ACTUARIAL ASSUMPTIONS USED FOR THE VALUATION

TOTAL INVESTMENT RETURN. 8.0% per year compounded annually. This rate consists of a long-term rate of pay inflation of 4.0% a year plus investment expenses of 0.5% plus a real rate of return of 3.5% a year. The net investment return is 7.5% per year compounded annually.

These assumptions are used to equate the value of payments due at different points in time. They were first used for the December 31, 1997 valuation. Approximate net rates of investment return, for the purpose of comparisons with assumed rates, are shown below. Actual increases in active member pays are also shown for comparative purposes.

	Year Ended December 31					5 Year Average*
	2008	2007	2006	2005	2004	
Rate of Investment Return [^]	4.1%	11.4%	12.9%	11.6%	11.7%	10.3%
Increase in Average Pay [#]	4.9	2.8	2.8	2.1	3.8	3.2
Real Rate of Return	-0.8	8.7	10.2	9.5	7.9	7.1

* *Compound rate of increase.*

For members employed throughout the most recent two years. For detail regarding pay increases, please see pages B-12 and B-13.

[^] *The nominal rate of return was computed using the approximate formula $i = I$ divided by $1/2 (A + B - I)$, where I is actual investment income net of expenses, A is the beginning of year asset value, and B is the end of year asset value.*

These rates of return should not be used for measurement of an investment advisor's performance or for comparisons with other systems.

INVESTMENT EXPENSES. 0.50% of average valuation assets.

PAY PROJECTIONS. These assumptions are used to project current pays to those upon which benefits will be based. The assumptions were first used for the December 31, 2004 valuation.

The annual rate of pay increases consists of two parts:

- (i) a long-term rate of pay inflation equal to 4.0%.
- (ii) merit and longevity increases which vary according to age or length of service. These rates are illustrated below.

Years of Service	KMEA	AFSCME	All Exempt	Non-Sworn Public Safety	Transit Union	Public Safety
1	4.0%	2.0%	4.0%	3.0%	2.5%	8.0%
2	4.0	2.0	4.0	3.0	2.5	8.0
3	4.0	2.0	4.0	3.0	2.5	8.0
4	4.0	2.0	4.0	3.0	2.5	8.0
5	4.0	2.0	4.0	3.0	1.0	8.0
6	0.5	2.0	0.5	3.0	1.0	8.0
7	0.5	0.5	0.5	3.0	1.0	8.0
8	0.5	0.5	0.5	3.0	0.0	1.0
9	0.5	0.5	0.5	3.0	0.0	1.0
10	0.5	0.5	0.5	3.0	0.0	1.0
11	0.5	0.5	0.5	3.0	0.0	1.0
12	0.5	0.5	0.5	3.0	0.0	1.0
13	0.5	0.5	0.5	3.0	0.0	1.0
14	0.5	0.5	0.5	3.0	0.0	1.0
thereafter	0.5	0.5	0.5	1.0	0.0	1.0

Actual average pays for members working both years have increased at the following rates.

	Year Ended December 31					5 Year Average*
	2008	2007	2006	2005	2004	
Average increase:	4.9%	2.8%	2.8%	2.1%	3.8%	3.2%

* *Compound rate of increase.*

For detail regarding pay increases, please see pages B-12 and B-13.

If the number and distribution of active members remain constant, then the total active member payroll will increase 4.0% annually for the base portion of the salary increase assumptions. This increasing payroll was recognized in amortizing unfunded actuarial accrued liabilities.

The mortality table was the 1994 Group Annuity Mortality Table.

Ages	Value at Retirement of \$1 Monthly for Life*		Future Life Expectancy (years)	
	Men	Women	Men	Women
50	\$140.93	\$147.30	30.69	34.89
55	132.64	140.64	26.15	30.17
60	122.40	132.01	21.83	25.59
65	110.53	121.65	17.84	21.28
70	97.62	109.73	14.29	17.30
75	83.48	95.52	11.12	13.60
80	68.62	79.89	8.37	10.31

* *Values are before post-retirement increases are reflected.*

This assumption is used to measure the probabilities of members dying before retirement and the probabilities of each benefit payment being made after retirement. This mortality table was first used for the December 31, 2004 valuation.

The rates of retirement used to measure the probability of eligible members retiring during the next year were as follows:

Retirement Ages	KMEA	AFSCME	All Exempt	Non-Sworn Public Safety	Transit Union
55	2%	5%	20%	5%	35%
56	2	5	20	5	35
57	2	5	20	5	35
58	2	5	20	5	35
59	2	5	20	5	35
60	10	10	25	10	30
61	10	10	25	10	30
62	50	50	50	50	50
63	10	25	25	25	25
64	10	25	25	25	30
65	100	100	100	100	100

Years of Service	Public Safety
20	2%
21	2
22	2
23	2
24	2
25	50
26	30
27	50
28	30
29	30
30	100

Retirement probabilities were applied for General and Transit members after both attaining age 55 and completing 15 years of service, or age 62 with 10 years of service (5 years for Exempt, 9 years for AFSCME and 8 years for KMEA). AFSCME members are also considered eligible for retirement at age 60 with 20 or more years of service. Retirement probabilities were applied for Public Safety members upon completion of 20 years of service with 100% retirement probability assumed at age 60 with 10 years of service.

Rates of disability were as follows:

Sample Ages	% of Active Members Becoming Disabled Within Next Year	
	Public Safety	KMEA
	Metro Transit AFSCME	Exempt CSO
20	0.15%	0.08%
25	0.18	0.08
30	0.20	0.08
35	0.29	0.08
40	0.42	0.20
45	0.65	0.26
50	1.05	0.49
55	1.84	0.89
60	3.06	1.41

Rates of separation from active membership were as shown below (rates do not apply to members eligible to retire and do not include separation on account of death or disability). This assumption measures the probabilities of members remaining in employment.

Sample Ages	Years of Service	% of Active Members Separating within Next Year					
		KMEA	AFSCME	All Exempt	Non-Sworn Public Safety	Transit Union	Public Safety
	0	18.0%	12.0%	12.0%	12.0%	18.0%	8.0%
	1	12.0	9.0	10.0	9.0	12.0	6.0
	2	10.0	7.0	8.0	7.0	10.0	4.5
	3	9.0	5.0	7.0	5.0	9.0	3.0
	4	8.0	4.5	6.0	4.5	8.0	2.0
25	5 or Over	11.0	11.7	12.4	7.4	7.4	2.0
30		8.0	10.5	10.4	5.8	5.8	1.8
35		5.4	8.3	8.1	3.8	3.8	1.3
40		3.6	5.7	6.4	3.1	3.1	1.0
45		2.6	3.5	4.8	3.0	3.0	0.7
50		2.1	1.5	3.9	3.0	3.0	0.5
55		2.1	0.6	3.1	3.0	3.0	0.4
60		2.1	0.5	2.4	3.0	3.0	0.4

Active member group size. The number of active members was assumed to remain constant. This assumption is unchanged from previous valuations.

Timing of contribution payments. The contribution requirements in this report anticipate regular payments throughout the year. Examples would be at each payroll date or in 12 monthly installments.

GLOSSARY

ACTUARIAL ACCRUED LIABILITY. The difference between (i) the actuarial present value of future plan benefits, and (ii) the actuarial present value of future normal cost. Sometimes referred to as “accrued liability” or “past service liability.” Under the actuarial cost method used the “AAL” differs somewhat from the value of future payments based on benefits earned as of the valuation date.

ACCRUED SERVICE. The service credited under the plan which was rendered before the date of the actuarial valuation.

ACTUARIAL ASSUMPTIONS. Estimates of future plan experience with respect to rates of mortality, disability, retirement, investment income and salary increases. Decrement assumptions (rates of mortality, separation, and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic assumptions (salary increases and investment income) consist of an underlying rate appropriate in an inflation-free environment plus a provision for a long-term average rate of inflation.

ACTUARIAL COST METHOD. A mathematical budgeting procedure for allocating the dollar amount of the “actuarial present value of future plan benefits” between the normal costs to be paid in the future and the actuarial accrued liability. Sometimes referred to as the “actuarial funding method.”

ACTUARIAL EQUIVALENT. Benefits whose actuarial present values are equal.

ACTUARIAL PRESENT VALUE. The amount of funds presently required to provide a payment or series of payments in the future. It is determined by discounting the future payments at a predetermined rate of interest, taking into account the probability of payment.

AMORTIZATION. Payment of an interest-bearing liability by means of periodic contributions of interest and principal, as opposed to a lump sum payment.

EXPERIENCE GAIN (LOSS). A measure of the difference between actual experience and experience anticipated by a set of actuarial assumptions during the period between two actuarial valuation dates, in accordance with the actuarial cost method being used.

NORMAL COST. The annual cost assigned, under the actuarial funding method, to current and subsequent plan years. Sometimes referred to as “current service cost.” An amortization payment toward the unfunded actuarial accrued liability is in addition to the normal cost.

RESERVE ACCOUNT. An account used to indicate that funds have been set aside for a specific purpose and are not generally available for other uses.

UNFUNDED ACTUARIAL ACCRUED LIABILITY. The difference between the actuarial accrued liability and valuation assets. Sometimes referred to as “unfunded accrued liability.”

VALUATION ASSETS. The value of current plan assets recognized for valuation purposes.

SECTION E

GASB STATEMENT NO. 25 INFORMATION

This information is presented in draft for review by the City's auditor. Please let us know if there are any items that the auditor changes so that we may maintain consistency with the City's financial statements.

Kalamazoo, Michigan 49007-4796

Dear Ms. Meyer:

Please find enclosed 30 copies of the Fifty-Seventh Annual Actuarial Valuation of the City of Kalamazoo Employees Retirement System. I look forward to presenting the report to the Investment Committee and the City on May 20, 2009.

Sincerely,

A handwritten signature in black ink, appearing to read 'W. James Koss', written in a cursive style.
